

ENERGY STATEMENT

As a company, Audax is committed to the communities in which it works and wishes to reduce any adverse impact on the environment arising from the activities of its business thereby contributing positively to environmental wellbeing and conserving resources.

As part of our continuing drive for quality in all things we do, we have therefore developed an Energy Policy Statement which will enable us to undertake all our activities at the lowest energy cost and with the lowest possible environmental impact.

We are committed to;

- minimising our energy and water consumption and costs
- using our energy more efficiently
- minimising waste and promoting recycling
- reducing all deleterious environmental impact arising from our energy use

To facilitate our commitment to responsible energy and environmental management, our long term goals are to integrate the following:

- minimise our energy and water consumption;
- minimise our energy and water costs;
- reduce our dependency on fossil fuels;
- reduce our emissions and pollutants such as Carbon dioxide;
- reduce all deleterious environmental impacts arising from our energy consumption;
- give high priority to energy efficiency investments;
- increase our investment in clean, efficient technologies;
- Purchase all fuels and utility services using the most cost-effective tariffs and where possible fuels will be generated by renewable sources;
- Assess all proposed energy saving schemes and place them in order of priority on the same basis of appraisal criteria used for all other investment;
- implement our policies through guidelines and training; and
- monitor progress and review this statement on an annual basis.

These goals are to be achieved as far as is practical, consistent with the activities and operational needs of Audax.

Putting all of this into Practice:

As of January 2009 Audax endeavored to ensure that all Cardboard waste from our Packaging / Repackaging Processes was sent for recycling. We believe that so far we have recycled double digit tonnes which haven't gone into landfill.
